The company's story begins since 2006. Over the long history of work the company has run a high number of car washing complex projects, some of which are presented in this presentation, and has established itself as a reliable

partner of banks:
as well as, leasing companies

Design and exterior appearance of the carwash completely fits into the place of installation and pre-agreement with the site owner. Because of this, our buildings meet all aesthetic norms and don't cause issues with local administrations.

Carwash is a lightweight metal structure, easy to install on the prepared site. The uniqueness of this design - it is able to operate independently from a centralized sewerage systems, water and heating. Collapsible carwash favorably with stationary that is mounted in a short time without the involvement of any heavy construction equipment, forces of several workers, ready to immediately get to work. The construction of the post car wash is made of prefabricated sections, floor made of concrete or metal, prefabricated walls and roof, not readily flammable insulated panels such as "sandwich". The installation of car wash fasting and the beginning of its operation takes 13-18 working days. Structures of carwash complexes have a ventilation system, lighting, cleaning and recycling of the circulating water system.

For the construction of the car wash post is not required the construction of major buildings with the device excavation and foundation. All of the negotiation issues in connection with the installation of car wash complex with the administration, always solves our company.

Dimensions of the car wash and the number of posts can be completely customizable for the intended installation location. Thus, a car wash can be placed almost anywhere.

In our car wash, we always use the most modern and innovative equipment, the leading Russian brands.
